To whom it may concern,

It is a great pleasure for me to write this letter of recommendation for Martín Bassola, a final-year undergraduate student in Mathematics at FAMAF, Universidad Nacional de Córdoba, Argentina. He is currently working on his undergraduate thesis in the area of Differential Geometry, under my supervision.

His project focuses on the study of magnetic trajectories on the manifold of oriented geodesics of three-dimensional hyperbolic space. As part of this work, Martín will be studying one of the influential papers by Prof. Nigel Hitchin (*Mono-poles and Geodesics*, Commun. Math. Phys.), and it would be an excellent opportunity for him to engage, even indirectly, with the author's ideas and contributions.

From the outset, Martín has demonstrated a strong interest in learning and a solid general knowledge of mathematics, which allows him to approach advanced topics with clarity and confidence. He works with great dedication and responsibility, combining intellectual curiosity with genuine enthusiasm for exploring new concepts. He is methodical and committed, consistently meeting deadlines and taking initiative in the development of his project.

Beyond his academic abilities, Martín is a kind, respectful, and warm individual who interacts positively with both peers and professors. His collaborative spirit and positive attitude make him a valuable presence in any academic or social environment.

For all these reasons, I strongly recommend Martín Bassola for participation in the Hong Kong Laureate Forum 2025. I am confident that this experience will be highly enriching for his academic growth.

Please feel free to contact me if you require any additional information.

Sincerely,

Dra. Yamile Godoy
Profesora Adjunta – FAMAF
Investigadora Adjunta – CONICET
