

## **To Whom It May Concern,**

It is with great enthusiasm that I write to recommend Ms. Wong Wai Lam for participation in The 2nd Hong Kong Laureate Forum. I am Joy Lau Chung Man, Associate Professor of Practice (Occupational Therapy) at The Hong Kong Polytechnic University, and I have had the privilege of serving as Wai Lam's academic advisor for the past two years. During this time, I have witnessed her remarkable passion for innovation, her dedication to advancing therapeutic services through technology, and her commitment to fostering interdisciplinary collaboration—qualities that are perfectly aligned with the mission of the Hong Kong Laureate Forum.

Wai Lam is an insightful and driven student who has demonstrated a profound interest in integrating cutting-edge technologies into occupational therapy. As a key member of the organizing committee for the PolyU We Care We Share Team, she has taken on leadership roles in planning and conducting a variety of impactful workshops. Notable among these is the “Clinical Use of 3D Printing” Workshop, in which she educated student members on harnessing technology to enhance therapy delivery. Her efforts have bridged the gap between healthcare science and innovation, while also offering life-changing therapeutic solutions to patients. For example, she has successfully employed an eye-tracking system to assist patients with amyotrophic lateral sclerosis, demonstrating her ability to translate theoretical knowledge into practical, patient-centered solutions. These initiatives have not only inspired her peers but also brought transformative benefits to individuals in need.

Beyond her contributions to workshops and service initiatives, Wai Lam has actively represented our university at academic and professional congresses. She has presented her work at prestigious events such as the Asia Pacific Occupational Therapy Congress and the Community Rehabilitation Network's 30th Anniversary cum Hong Kong Society for Rehabilitation's 65th Anniversary Conference. Through these platforms, Wai Lam has shared her innovative approaches to integrating technology in occupational therapy with professionals from diverse backgrounds, further underscoring her ability to contribute meaningfully to global dialogues in her field.

Academically, Wai Lam stands out for her exceptional clinical and practical knowledge. She consistently demonstrates a strong capacity for reflection, relentless determination, and a proactive approach to her studies and projects. These attributes, combined with her passion for innovation, equip her to make thoughtful and impactful contributions to the discussions and collaborations at the Hong Kong Laureate Forum.

Her academic achievements and professional experiences make her an ideal candidate who will enrich the Forum's interactive environment and advance its mission.

I wholeheartedly and unequivocally support Wai Lam's application for The 2nd Hong Kong Laureate Forum. Her passion for merging medical knowledge and technology, her academic excellence, and her unwavering commitment to advancing healthcare services position her as an outstanding candidate. I am confident that she will contribute significantly to the Forum's discussions and inspire fellow participants.

Thank you for considering her application. Should you require any additional information, please do not hesitate to contact me at [Joy.Lau@polyu.edu.hk](mailto:Joy.Lau@polyu.edu.hk).

Sincerely,

A handwritten signature in black ink that reads "Lau Chung Man". The signature is written in a cursive, flowing style with a horizontal line underneath the name.
