

## School of Geography, Earth & Atmospheric Sciences

March 26, 2025

Hong Kong Laureate Forum

To whom it may concern,

**RE: Rosie Harrison, BSc student, University of Melbourne**

I strongly recommend Rosie Harrison for the Hong Kong Laureate Forum in 2025.

I taught Rosie as an undergraduate student in Semesters 1 and 2, 2024, in the first year subjects EVSC10001 The Global Environment and EARTH10002 Understanding Planet Earth, which were undertaken as part of BSc, through the School of Geography, Earth & Atmospheric Sciences at The University of Melbourne.

Rosie is an independent and hard-working student who shows great enthusiasm for Geoscience. She achieved H1 marks for both Semester subjects, showing her strong intellectual ability to learn quickly and work hard in class. She particularly excelled in geology concepts covered in Geoscience: Evolution of the Earth and achieved an H1 for practical skills demonstrated in the end Semester practical exam. She is an intelligent and keen student, particularly in the field, who applied herself to work on the extended trip and achieved an H1 mark for the field work assessment.

She has continued this passion for geology by continuing her studies to major in Earth Sciences. Rosie was awarded a Global Mobility scholarship in 2025 and is currently on exchange at a University in Canada. Her adaptability to living in different countries is shown by excelling in different learning environments.

Rosie has a mature and organized approach to studies, which is shown in getting assignments in on time and studying in the laboratory outside of class time. She has adapted well to University studies and to changing learning environments in lectures, practical classes and on a three-day field trip. She displays many leadership qualities in class and on field trips. This has fed into her wider life skills, as demonstrated by the many facets of her life, such as her leadership roles at secondary school and at University, and her long standing volunteer work.

Rosie has won awards for her strong leadership skills and has served in many leadership roles. She achieved her school colours, was co-captain of the Pride Club and was Patrol leader for Scouts. At school, she was awarded the "Wesley College Jean Oldfield Award" for excellent leadership and service to the College community.

Rosie has excellent communication skills in both oral and written communication and often asks questions in class. She is able to converse easily, answer questions and solve problems during group work, demonstrating her strong team work, lovely nature and ability to get along well with others. She is a pleasure to teach and I highly recommend her for the program for future science leaders.

Yours truly,
